

The screenshot shows the homepage of the FirstAidConnect - Simple Version website. The header features a red logo with a white plus sign and the text "FirstAidConnect". To the right are links for "Home", "Guide", "AI Assistant", and "Quiz". Below the header is a dark banner with the text "Educational Purpose Only" in a small, semi-transparent box. The main title "Be Prepared. Save a Life." is displayed in large, bold, white letters. A subtitle below it reads "Instant access to step-by-step first aid instructions for common emergencies. Powered by AI for real-time guidance." Two buttons are visible: "View Emergency Guide" in red and "Ask AI Assistant" in white. The footer contains a "Quick Access" section with four cards: "Cuts & Bleeding" (Medium risk), "Burns (Minor)" (Medium risk), "Choking" (Critical risk), and "Sprains & Strains" (Low risk). Each card includes a brief description of the injury.

Quick Access

Cuts & Bleeding

Medium

Trauma to the skin causing blood loss.

Burns (Minor)

Medium

Damage to skin caused by heat, chemicals, or electricity.

Choking

Critical

Blockage of the airway that makes breathing difficult or impossible.

Sprains & Strains

Low

Injury to ligaments or muscles, often from twisting or overuse.

Hello, I am the FirstAidConnect AI Assistant. I can help with basic first aid steps. This is for educational purposes only. In an emergency, call your local emergency number.

I am having a cut

I am an AI assistant for educational purposes only. In a medical emergency, call emergency services immediately. Here's how to treat a cut: 1. Wash your hands with soap and water. 2. Rinse the cut with clean water. 3. Stop the bleeding by applying pressure with a clean cloth. 4. Once bleeding stops, apply a bandage to protect the cut.

QUESTION

What should you do first for a minor burn?

Run cool water over it for 10–20 minutes

Apply ice

Pop any blisters

Rub butter on it

Check Answer

Correct! Ice and butter can worsen the injury.

Cuts & Bleeding

Trauma to the skin causing blood loss.

Medium

Immediate Steps

1. Wash your hands or use gloves if available.
2. Apply firm, direct pressure with a clean cloth or gauze.
3. Raise the injured area above the level of the heart if possible.
4. Once bleeding slows, gently rinse the wound with clean water.
5. Cover with a sterile bandage or clean dressing.

Do's

- Keep the person calm and still.
- Use a tourniquet only if bleeding is life-threatening and you are trained.

Don'ts

- Do not remove large objects stuck in the wound.
- Do not apply direct heat to the wound.

If the condition worsens or seems severe, contact emergency services immediately.

Fracture

A suspected or confirmed broken bone.

High

Immediate Steps

1. Keep the injured area still and supported.
2. Control any bleeding with gentle pressure around (not directly on) open fractures.
3. Apply cold packs wrapped in cloth to reduce swelling.
4. Seek urgent medical attention.

Do's

- Call emergency services if the bone is visibly deformed or the person cannot move.
- Support the limb in the position found until help arrives.

Don'ts

- Do not push a bone back into place.
- Do not allow the person to walk on a suspected broken leg.
- Do not move the person unless necessary for safety.

If the condition worsens or seems severe, contact emergency services immediately.
